Iliac sidebranch EVAR in aortoiliac aneurysm with severe iliac tortuousity

Operators: T. Kölbel, C. Behrendt

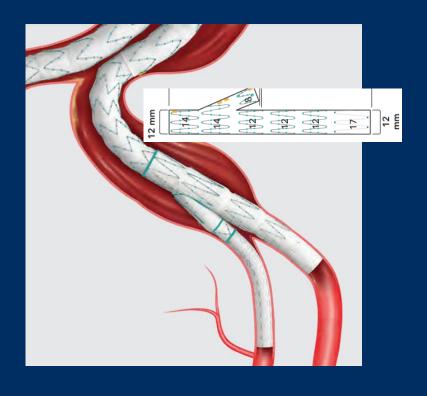

- Clinical data:
 - Aortoiliac aneurysm 56 mm
- Risk factors / Present state:
 - Severe multisite artery disease: coronary artery disease, bilateral carotid artery stenosis (50-80%)
 - History of coronary bypass (2002) and percutaneous coronary intervention (2017)
 - Arterial hypertension
 - Dyslipidaemia

- Aortobiiliacal aortic aneurysm
 - Infrarenal: 56mm,asymptomatic
 - Left iliac: 36mm,asymptomatic
 - Severe iliac turtuousity

Procedural steps:

- 1. Right common femoral artery access (12F), left common femoral artery access (22F)
- 2. Carbondioxide and saline flushing of ZBIS,
 Zenith Alpha Abdominal and Zenith Iliac Spiral
 Limbs
- 3. ZBIS introduction left CFA, snaring and crossover maneuver
- 4. Angiography and partial ZBIS-deployment
- 5. Internal iliac artery catheterization through crossover 12F Flexor sheath, Full ZBIS deployment

- Procedural steps:
 - 6. Bridging stent deployment (Advanta V12, Getinge) and kissing balloons
 - 7. Zenith Alpha Abdominal introduction and deployment
 - 8. Extension to right common iliac artery
 - 9. Bridging component to left sided ZBIS
 - 10. Self-expanding stent left external iliac artery and final angiography
